	mation Disclosure Statement(s) (PTO-1449 or F er No(s)/Mail Date	PTO/SB/08)	5) Notice of Informal F 6) Other:	Patent Application (PTO-152	2)				

The six (6) sheets of drawing submitted on June 28, 2004, are acceptable.

The disclosure is objected to because of the following minor informality: on page 5 of the disclosure, the two lines describing **Figure 4b** are repeated three times. Appropriate correction is required. Applicant's cooperation is requested in correcting any other errors of which applicant may become aware in the specification.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. § 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-4, 6, 7, 9, 12-15, 17, and 18 are rejected under 35 U.S.C. § 102(b) as being clearly anticipated by U.S. Patent 6,061,381 to Adams et al. Adams et al discloses a semiconductor optical device comprising a transverse Bragg resonance waveguide comprised in turn of a cylindrical waveguiding channel surrounded by Bragg-type periodic index media (see Figure 2 and corresponding disclosure). The Adams et al device is part of a vertical cavity surface emitting laser which means that the device is included within a "laser", or an "amplifier", or an "oscillator", as claimed by applicant. This type of laser also has means for electrically providing gain through the Bragg-type periodic index media. Notice that the Bragg-type periodic index media is a periodic lattice of regions having an index of refraction distinct from that of the central waveguiding channel. Adams et al also discloses corresponding methods of fabricating and operating the semiconductor optical device.

Claims 1-5, 7, 9, 12-16, and 18 are rejected under 35 U.S.C. § 102(b) as being clearly anticipated by U.S. Patent 6,201,825 to Sakurai et al. Sakurai et al discloses a semiconductor optical device comprising a transverse Bragg resonance waveguide-type active region comprised in turn of a longitudinal waveguiding layer (channel) sandwiched on two sides by Bragg-type periodic index media. The Sakurai et al device is part of a vertical cavity surface emitting laser which means that the device is included within a "laser", or an "amplifier", or an "oscillator", as claimed by applicant. This type of laser also has means for electrically providing gain through the Bragg-type periodic index media. Notice that the Bragg-type periodic index media is a periodic lattice of regions having an index of refraction distinct from that of the central waveguiding channel. Sakurai et al also discloses corresponding methods of fabricating and operating the semiconductor optical device.

Claims 8, 10, 11, and 19-21 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims. Neither Adams et al nor Sakurai et al (the closest prior art of record) discloses or suggests *optically* providing gain through the Bragg-type periodic index media. Also, neither of these references discloses or suggests that the periodic lattice of regions comprising the Bragg-type periodic index media comprises an array of *holes*. Further, neither of these references discloses or suggests the operational specifications set forth by applicant in claims 20 and 21.

Application/Control Number: 10/763,541 Page 4

Art Unit: 2874

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Other related Bragg resonant waveguide structures can be seen in the cited references to Keck et al, Fouckhardt et al, and Mizutani.

Any inquiry concerning the merits of this communication should be directed to Examiner John D. Lee at telephone number (571) 272-2351. The Examiner's normal work schedule is Tuesday through Friday, 6:30 AM to 5:00 PM. Any inquiry of a general or clerical nature (i.e. a request for a missing form or paper, etc.) should be directed to the Technology Center 2800 receptionist at telephone number (571) 272-1562, to the technical support staff supervisor (Team 8) at telephone number (571) 272-1564, or to the Technology Center 2800 Customer Service Office at telephone number (571) 272-1626.
